

With the weather shifting back and forth between winter and spring, home owners are looking to improve energy efficiency. Many would also like to maintain the same look of their house or improve upon it. We recently completed a large bowed sash that was installed during a spring-like reprieve from the cold.

The installed finished product built to our customer's specifications. It will maintain the character of the house and have a positive impact on their heating bill due to the insulated glass. The view from the interior can be found below.

## Project Details

We were asked to make a bowed window with tru-divided lites. The 21 lites are insulated glass with low-E coating. The size of the entire unit can be seen

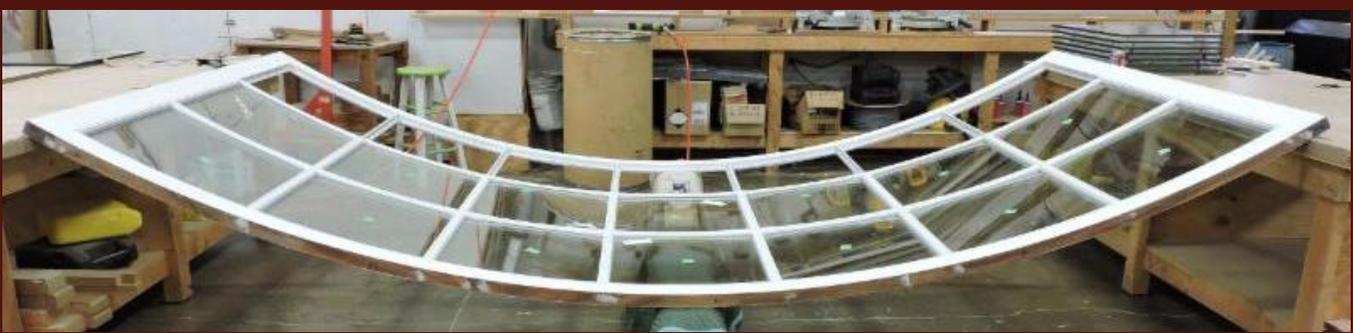

better in other pictures, however, it measures 9 feet 7 inches wide by 6 feet 9 inches tall. It was fabricated from Sapele Mahogany and painted by the installer.

When the radius of the bowed sash is provided, we make a template to match. The wood is then carefully bent and glued up to obtain the necessary jamb depth. Once the exterior frame is completed, the muntins are added for each of the tru-divided lites.

Feel free to check out our Facebook page where you can see a video of the completed sash in its raw Mahogany form. ([Facebook Bowed Sash Video](#))

Dry fitting the glass to ensure proper fit

Caulk to guarantee seal of window to avoid leaks

Placing glass into divided lite space

Glass in place

Placing wood stops

Finished lite

The bottom row of lites are tempered glass in order to meet code because of how close the glass is to the finished floor.

In order to load the unit for delivery, it took six people to safely carry it and place it in our trailer for delivery. To see how it all played out, you can watch the video on our Facebook page ([Facebook Loading Bowed Sash Video](#))

## Combination Storm/Screen Windows

Thinking of spring? Would you rather not climb on a ladder every year to exchange your storm window with a screen window?

We have just the product for you! Our Combination Storm/Screen window has storm inserts that can be removed from inside your home and a permanent screen on the outside of the storm. Our Combination Plus Storm/Screen window has four inserts, two storm inserts and two screen inserts so that it looks like a traditional storm or screen window, but can be changed from the safety of your home. It makes spring cleaning much easier, too!

You can click on the following link to obtain more information on these storm and screen windows that we offer:

If you are an architect, contractor, or an owner of a historical building or home who is looking to renovate a property, we want to assist you with your architectural millwork needs.

We fabricate historically accurate:

windows  
window sash  
storm windows  
doors  
storm doors

Our capabilities include manufacturing custom millwork for homes and buildings across the United States.

We can fabricate products that most large window and door companies will refuse.
