

## Traditional Storm & Traditional Screen Windows

Our Traditional Storm window is fabricated from Northern White Pine using mortise and tenon joints, which provide strength and stability. We utilize clear annealed glass with putty glaze. If you are looking for different types of glass, we can quote for restoration glass, low-E coating, or specialty glass.

Our Traditional Screen window is also fabricated from Northern White Pine using mortise and tenon joints. You will find charcoal aluminum screen being used in our windows which tears less easily than fiberglass mesh for extended use. We have the ability to offer brass screen at a premium as an option.

### Adams Standard Profiles:

Thickness:	1-1/8"	Bottom Rail Width:	3-1/2"
Top Rail Width:	2-1/8"	Center Bar Width:	1-1/4" (storms)
