

## Custom Entry Double Door

Adams Architectural was requested to build a custom set of double doors for a residence.

The homeowner wanted to maintain a natural feel with the stone front and the vegetation that leads the way to the main entrance. The use of teak, which has great weather-resistance properties, enhances one's initial impression of this home.

Full view of installed doors.

### Project Details

- o 2-1/4" thick
- o Center astragal
- o Solid teak frame
- o Each door is 40-3/8" x 77"
- o Horizontal panels with vertical stile
- o Two colors of stain

On the left, the before image. We removed a steel 1970s style door. On the right, the new doors.

Here you can see greater detail of the beautiful grain in the teak. The coloring usually starts as olive-brown or yellow-brown which will become more golden with time. Color and grain pattern will vary, which makes each door uniquely wonderful.

Teak is widely considered the platinum standard for decay resistance and it is almost impervious to the effects of snow, frost, or rain. It shows superb stability and is a close-grained hardwood with high natural oil and rubber content.

We would love to work with you to create a custom entry door that enhances the beauty of your home and suits your style. You can click on the following link to view other projects: [Custom Doors](#).

If you are an architect, contractor, or an owner of a historical building or home who is looking to renovate a property, we want to assist you with your architectural millwork needs.

We fabricate historically accurate:

windows  
window sash  
storm windows  
doors  
storm doors

Our capabilities include manufacturing custom millwork for homes and buildings **across the United States**.

We can fabricate products that most large window and door companies will refuse.
