

Self-Storing Storm/Screen Windows

Our Self-Storing Storm/Screen window is fabricated from Northern White Pine using mortise and tenon joints, which provide strength and stability. The track frame can be either white or bronze aluminum; almond and black are available for an additional cost. The screen is charcoal fiberglass mesh. There are options for Low-E glass, tempered glass, or obscure glass with these storm windows.

The beauty of this product is that it looks like a traditional storm window but provides the contemporary ease of not having to store any storm or screen panels. The amount of air flow can be adjusted at several points along the track where the storm panel raises.

Adams Standard Profiles:

Top Rail Width: 2-1/8"
Stile Width: 2-1/8"

Thickness: 1-1/8"
Bottom Rail Width: 3-1/2"
Center Bar Width: 2-1/8"
